

Berlin-Clock

The probably most famous clock of the world, called also amount apprenticeship-clock, was invented by Mr. Dieter Binnerger in the 70s.

It was built for the town of Berlin and stood from 1975 to 1995 in Berlin in Kurfürstendamm.

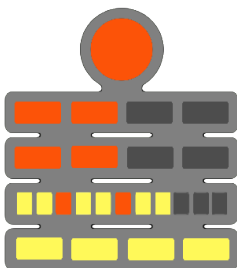

Today the original stands in Berlin in the European centre. The Berlin clock indicates the time on the basis of light symbols:

- The first line - lamp five hours.
- The second line - lamp one hour.
- The third line - lamp five minutes.
- The fourth line - lamp one minute.

In the third line every third lamp is to the better recognition of the quarters of an hour in another paint.

Already after a short time one has got used to this unusual time announcement and can do the time like from of a normal clock read.

A cult property, must for every Berliner or fan of Berlin.

Example:

2 x 5 hours

2 x 1 hour

8 x 5 minutes

4 x 1 minute

= 12 : 44
